

If you really need a website, here's the essential checklist for starting it from scratch:

1. **Domain**, i.e. *sitename.com* or *.net*, *.biz*, *.eu* etc. After you bought the domain, you may use it for creating a corresponding website.

2. **Hosting** (or *webhosting*). You can obtain this based on a contract with a company that owns a web server. Or, I can provide this - either see the quality hosting banners, or we can negotiate that.

3. The actual **webdesign**. More details about webdesign [here](#) .

4. The **promotion** (or publicity) for the website you just built. I wrote more things about that [here](#) .

Mainly, these are the elements you need for having a functional and popular website. We can cooperate on ALL these phases.
