

If you already have a website, we can attach it some interactivity. That may consist in:

- Discussion lists / Newsletter - at Yahoo!Groups (see the [For You Newsletter](#) ), or at GoogleGroups.

- Forums - based on phpBB - [here](#) is an example.

- Interactive websites, where news, articles can be published, by the administrators and users - [Copiii Indigo.ro](#) is an example.

The features of the websites may be diverse, such as blog, polls, comments of the articles from the readers, GoogleMaps (it shows various locations [on the world map](#) ), photo galleries, multimedia content (we need streaming support installed on your server), catalogues of various types, forum integrated in the website (so no extra accounts are needed), and so on...

- Online sales, like [Kenterprise.ro](#)
